

**A Press release from Vileda Professional**

# Technical Declaration

## **Suitability for usage in food processing areas applying the HACCP concept.**

Herewith we confirm, that our mechanical Vileda® cleaning products, specifically Vileda® scourers, wiping cloths and hand squeegees (which are primarily made of fibres, latex and foams), as well as the Vileda® Swep range and the Waste Management products, according to our specifications and best knowledge, do not contain any harmful or dangerous components in their composition which may migrate or evaporate during usage and storage under usual conditions.

We thus confirm that our products are suitable for cleaning of surfaces that are in direct contact with food. According to our best knowledge, our products do not release any hazardous substances on the cleaned surfaces, if appropriately used. In light of their non-hazardous composition and their high mechanical cleaning performance, we judge our products to be ideally suited to support HACCP concept approaches in food processing companies by cleaning of surfaces or machines for food preparation, cleaning of food cooking devices, cleaning of areas or rooms for storage or preparation of food.

However, it must be stated that our products are not intended to get into prolonged direct contact with food, e.g. during manufacturing, treatment, packaging, transportation or consumption of food.

Vileda® products are subject to FHCS Internal Quality Management System in which we are applying highest standards to the selection of our raw materials and semifinished materials.
